

Cisco Information Server Basic (ANCISB)

Duration: **5 days**

Who should attend?

1. Data Engineers
2. Solution/BI Architects
3. Administrator(s)
4. Data Architects

Prerequisites

1. Understanding of databases in general
2. Understanding of SQL concepts with the ability to develop in SQL
3. Basic Windows skills
4. Understanding of Web Services

Course Objectives

1. Be familiar with the principles of data virtualization
2. Learn the skills necessary to implement data virtualization including data source introspection views, procedures, publishing
3. Understand governance topics such as query optimization, caching, security

Course Content

This 5-day, instructor-led course addresses engineers and administrators who are familiar with data integration, but do not have experience with Cisco Data Virtualization technology. This course includes hands-on accelerated training on installing and developing with Cisco Information Server Application Data Services. It provides technical guidance to engineers who will be performing complex integration activities.
