

## Climate Change: Economics and Governance

### About the course

Climate change is reshaping global markets, forcing us to rethink supply chains, resources and the way we do business now and for years to come. This programme gives you a comprehensive, fully integrative and multi-disciplinary understanding of the threats, challenges and opportunities the lie ahead. Gain the competitive insights and tools to position your organisation at the forefront of change.

### Who should attend?

- Senior executives searching for insight into how climate change affects their business
- Policy makers and decision makers from international governments and intergovernmental organisations working in the field of climate change and the environment
- Professionals within private sector companies dealing with climate change through corporate social responsibility
- Companies and industry groups facing carbon regulation and seeking a greater understanding of the issues
- Global development professionals that deal with the impact of climate change and its related policies

### Learning outcomes

- Get the big picture on climate change: Fully explore the science, economics and legal dimensions and considerations from a holistic perspective.
- Gain an integrative understanding of the politics, governance and institutional development challenges at play on the global level.
- Build the skills to leverage climate models and science to trace the link between carbon emissions and economic growth and competitiveness.
- Acquire the knowledge to formulate strategies for adaptation and mitigation.
- Determine the primary risks and challenges, as well as the emerging opportunities that climate change can deliver to your organisation and others.
- Lead the narrative and become an empowered agent for change within your organisation and stakeholder ecosystem.
- Accelerate the leadership competencies, the knowledge base and the tools within your organisation to drive strategic change in this complex space.
- Get immediate, practical tools and solutions to execute that change.
- Gain an instant, expert overview of your competitive landscape; the threats, risks and emerging opportunities that are set to totally reconfigure your market.

- Enjoy privileged access to the game-changing research and ideas of renowned LSE faculty, thought leaders in the climate change space.
- Leverage global perspectives from a diverse cohort of senior executives and leaders from a breadth of industries.
- Leverage all of this to set the agenda and position your organisation at the very forefront of positive and proactive change.

## Key topics

- Understand the international institutional architecture for climate change, including international law, political bargaining and policy-making and implementation by governments, non-governmental organisations, businesses and communities.
- Determine vulnerability and resilience to climate change using information from climate models and science.
- Analyse the links between adaptation, economic growth and poverty reduction as well as the role of public policy in promoting adaptation, including financing adaptation. We also explore the technologies to reduce emissions and their costs and policy instruments, including emissions trading and carbon markets.
- Investigate the relationship between economic growth, competitiveness and carbon emissions.
