## Overview

Security professionals armed with the necessary skills and knowledge are the only way to create value added departments. As quickly as the world and its continents develop, so do the risks and threats. Companies can no longer view their security departments and employees as lower level functions. In order to ensure departments function effectively within the realm of the larger corporate objectives, it is essential that security managers and executives can manage and lead their teams to achieve effective industrial security and programmes that can be implemented successfully.

In order to achieve a consistent level of best practice the security manager needs to understand the needs of his industry, his team and his security projects.

The seminar is structured to equip delegates with the specialist knowledge to perform their management and supervisory duties to international standards in industrial security.

## Course Objectives

**At the end of the seminar, delegates should understand the principals of:**

- Best management practice and how to apply these principles
- Planning security projects and implementing these effectively
- Creating a protection programme to protect intellectual property in addition to physical assets
- Running a pro – active professional security team

## Who should attend?

- Surveillance / officers / director
