

IBM QRADAR SIEM FOUNDATIONS

DURATION: 3 DAYS

COURSE OVERVIEW

IBM QRadar SIEM provides deep visibility into network, user, and application activity. It provides collection, normalization, correlation, and secure storage of events, flows, asset profiles, and vulnerabilities. QRadar SIEM classifies suspected attacks and policy violations as offenses.

In this 3-day instructor-led course, you learn how to perform the following tasks:

- Describe how QRadar SIEM collects data to detect suspicious activities

- Describe the QRadar SIEM component architecture and data flows

- Navigate the user interface

- Investigate suspected attacks and policy breaches

- Search, filter, group, and analyze security data

- Investigate the vulnerabilities and services of assets

- Use network hierarchies

- Locate custom rules and inspect actions and responses of rules

- Analyze offenses created by QRadar SIEM

- Use index management

- Navigate and customize the QRadar SIEM dashboard

- Use QRadar SIEM to create customized reports

- Use charts and filters

- Use AQL for advanced searches

- Analyze a real world scenario

- Extensive lab exercises are provided to allow students an insight into the routine work of an IT Security Analyst operating the IBM QRadar SIEM platform. The exercises cover the following topics:

- Using the QRadar SIEM user interface

- Investigating an Offense triggered by events

- Investigating the events of an offense

- Investigating an offense that is triggered by flows

- Using rules

- Using the Network Hierarchy

- Index and Aggregated Data Management

Using the QRadar SIEM dashboard
Creating QRadar SIEM reports
Using AQL for advanced searches
Analyze a real-world large-scale attack

The lab environment for this course uses the IBM QRadar SIEM 7.3 platform.

TARGET AUDIENCE

This course is designed for security analysts, security technical architects, offense managers, network administrators, and system administrators using QRadar SIEM.

COURSE OBJECTIVES

After completing this course, you should be able to perform the following tasks:

1. Describe how QRadar SIEM collects data to detect suspicious activities
2. Describe the QRadar SIEM component architecture and data flows
3. Navigate the user interface
4. Investigate suspected attacks and policy violations
5. Search, filter, group, and analyze security data
6. Investigate events and flows
7. Investigate asset profiles
8. Describe the purpose of the network hierarchy
9. Determine how rules test incoming data and create offenses
10. Use index and aggregated data management
11. Navigate and customize dashboards and dashboard items
12. Create customized reports
13. Use filters
14. Use AQL for advanced searches
15. Analyze a real world scenario

COURSE CONTENT

Unit 1: Introduction to IBM QRadar
Unit 2: IBM QRadar SIEM component architecture and data flows
Unit 3: Using the QRadar SIEM User Interface

Unit 4: Investigating an Offense Triggered by Events
Unit 5: Investigating the Events of an Offense
Unit 6: Using Asset Profiles to Investigate Offenses
Unit 7: Investigating an Offense Triggered by Flows
Unit 8: Using Rules
Unit 9: Using the Network Hierarchy
Unit 10: Index and Aggregated Data Management
Unit 11: Using the QRadar SIEM Dashboard
Unit 12: Creating Reports
Unit 13: Using Filters
Unit 14: Using the Ariel Query Language (AQL) for Advanced Searches
Unit 15: Analyzing a Real-World Large-Scale Attack
Appendix A: A real-world scenario introduction to IBM QRadar SIEM
Appendix B: IBM QRadar architecture

COURSE PREREQUISITES

Before taking this course, make sure that you have the following skills:

1. IT infrastructure
2. IT security fundamentals
3. Linux
4. Windows
5. TCP/IP networking
6. Syslog
