## Introduction:

Drilling operations can be interrupted by the malfunction of equipment and systems, or the lack of competence of drilling personnel (people). These interruptions result in non-productive time (NPT) which is costly but avoidable. inspection services can reduce downtime and save money by improving the reliability, safety and environmental impacts of your drilling programmes.

In doing so, this training course can help you continue with what really matters: drilling as safely and efficiently as possible. rig inspection services can help you optimise your drilling rig or provide you with an in-depth indication of the technical state of the drilling rig you intend to hire.

## Course Outline:

- Full rig condition survey
  - Are you about to commence a drilling operation or are you planning on contracting a drilling rig? Our full rig condition survey can give you an accurate insight into the state of maintenance and the working conditions of the equipment and systems on any drilling unit.
- 

- Dropped-objects survey
- In addition to a full rig condition survey or as a stand-alone service, This course can help you increase the safety and reliability of your rig. By identifying objects that are at risk of falling from the derrick or other raised structures, such as bolts or lifting points that are improperly added to structural members.

- Compliance survey
- Does the drilling rig comply with your company's safety and operations standards? Does it comply with local and international standards?
- Marine safety survey
- Is your workforce's training/qualifications/emergency response of critical marine and emergency equipment compliant with company/industry standards?
- Selection survey
- Are you seeking a rig for your new drilling campaign?

- This course can assist you with visual selection surveys which provide you with a snap-shot of the condition of your shortlisted rigs, while giving you advice on the best option, based on your requirements.
  - Acceptance survey
- 
- Are you purchasing or contracting a new-build/refurbished drilling rig and is this rig fit for purpose? Does it comply with the required standards and/or your contractual agreements?
  - Value assessment
  - Do you need to know the economic value of your rig or rig fleet? Based on the new prices of the major equipment.
