Environment & Sustainability

Duration: 5 Days

Introduction:

This 3-Days course has been designed to provide the learner with a practical introduction to environmental sustainability so they are equipped with the knowledge, understanding and motivation to make a positive difference within their organization. On completion of the course, learners will have basic environmental awareness to make a positive contribution

within their organization. The course is delivered through trainer based presentations and practical activities.

Who should attend?

Environmental Sustainability Skills for the Workforce is one of a suite of courses, under the banner of Environmental Sustainability Skills for the Workplace, which is a new development programme aimed at non-environmental specialists. The course is ideal for members of a team who work at an operational level in any job role, across all sectors, to ensure that environmental sustainability is embedded in to all job roles of a company.

Course learning outcomes

On completion of the course, the Learner will have knowledge and understanding of:

- The main environmental and economic risks and opportunities.
- The compliance obligations and business drivers for change.
- The main potential impacts on environment and sustainability.

- How to improve environmental performance.
- The different types of pollution.
- The best practices to reduce consumption and preserve the environment
- The importance of preserving the environment and saving resources for future generations
- Learn how you can reduce your impact on the environment as an individual
- Fully understand the impact that workplaces have on the environment
- Have a better understanding of climate change, human impact, and finding the right balance

Training Methodology

Participants will learn by active participation during the program through the use of exercises, questionnaires, syndicate and group discussion, training videos and discussions on "real life" issues in their organisations. The program is hinged around a real case study from an entirely different industry sector to provide a testing environment that develops real investigative and problem solving skills.

Assessment

Learners are assessed through an online multiple-choice exam
