The Effective Financial Controller: Managing Financial Functions & Improvement Opportunities

Introduction:

Financial Controllers operate in a global environment where flexibility is the watchword. There has been widespread recognition of the need for finance to develop from being a scorekeeper to a business partner. Many organisations have changed their finance function as a result. Non-financial objectives such as risk, IT ROI, quality, reliability, lead times and customer satisfaction have gained in importance. Much more attention needs to be paid to the external environment, particularly the business' competitive advantage, applying a wider strategic perspective. In this programmer you will learn how to:

- Identify alternative roles for controllers in complex organizations
- Clarify both technical, managerial and strategic implications of financial control
- Integrate new developments in strategic management accounting,
 information management and support for decision making
- Implement methods of change management in their organization

Who should attend?

The training session is beneficial to all financial employees involved in the daily operation and control of financial functions and is of particular benefit to those employees who aspire to become senior personnel in their future careers.

Methodology

This interactive Training will be highly interactive, with opportunities to advance your opinions and ideas and will include;

- Lectures
- Workshop & Work Presentation
- Case Studies and Practical Exercise
- Videos and General Discussions

Certificate

BTS attendance certificate will be issued to all attendees completing minimum of 80% of the total course duration.

Course Objectives:

- Understand the extent of change in the role of the Financial Controller and to focus on the areas of their organisation where change is required
- Use the information sources within their organisation to assist the management process
- Prepare for the introduction of advanced methods of information management
- Critically assess the planning process in their organisation
- Participate fully in strategic planning

- Understand the role of advanced budgeting and where it might fit into their organisation
- Integrate new developments in strategic management accounting, information management and support for decision making
- Implement methods of change management in their organisation
