## Introduction to Oil Trading & Price Risk Management

## **Introduction:**

Crude oil and petroleum products are considered among the world's most important resources. The fossil fuel industry has a pivotal role in driving the global economy. Crude oil and the petroleum products derived from it, plays an important part in the economic activity of all nations. Petroleum itself is used for numerous products, that include petrochemicals, medicines, cosmetics, and thousands of other products used in our daily lives, in addition to serving as the world's primary fuel source.

This Introduction to Oil Trading & Price Risk Management training course is designed to provide you with a complete understanding of the financial and physical and markets for crude oil and petroleum products. The economic framework of the oil industry is studied in detail with a particular reference to economic slowdown caused by pandemics. In addition, as the oil industry faces challenges related, the impact of the shale industry as well as new regulations in curbing carbon emissions will be examined on the oil producing and consuming nations.
